

AGT starts business with certified service partner in Saudi Arabia

Riyadh-based office will be working at full capacity within two weeks

Riyadh, 10 June 2003 – With more than a dozen visits to Middle East countries already tucked under their belt in 2003, AGT, the world's top supplier of premier security products, solutions and services today opened their Riyadh office to serve clients in Saudi Arabia. The AGT Riyadh authorised service partner has already been active setting up the necessary business contacts since last December and will now be operating at full capacity within two weeks.

With this new office opening AGT is consequently following their ambitious strategic plan to maintain offices in every Middle Eastern country by the end of 2004. With offices and certified service partners in more than twenty countries there are still some important countries in the Middle East area where AGT is already doing business and simultaneously screening office space, training personnel. Until offices are set up in every Middle Eastern country those countries without offices today will not be excluded from AGT business, but be serviced by those offices that have already opened.

«By their nature, security issues are confidential. You would surely not like to evaluate them with an anonymous postbox company or dubious internet-based supplier», explains Mario Grossmann, Managing Director of AGT. «For AGT it is clear that only branch offices and carefully selected and trained personnel in the serviced countries can do the job properly and provide our clients with the degree of security they seek,» he continues.

About AGT

AGT is a leading supplier of premier security products, solutions and services. Based on partnerships with cutting edge technology partners AGT transfers state-of-the-art and tomorrow's technology from Germany and Europe to international clients.
